

The Cape Fear Hydrologic Model is now available for your use. You can request an account to access the model via the Division of Water Resources' server. To request an account, contact Phil Fragapane at 919-715-0389 or [phil.fragapane@ncmail.net](mailto:phil.fragapane@ncmail.net). When the account is set up, you will need to do the following to access the model:

The address for the model server is: [appserver.ncwater.org](http://appserver.ncwater.org)

The first screen you will get asks for the username and password . After you log in, choose "desktop" (note: the first time that you access the server, you will need to install the client software from Citrix. Click on the "Download clients from the Citrix software site <http://www.citrix.com/download/>" link at the bottom of the page. During the setup for the Citrix client, use "appserver.ncwater.org" when asked for a server URL. Once this is installed, go back to your browser and click on the "desktop". Once you have the remote windows desktop displayed, you can perform model runs. To end your session, log off of the remote windows desktop. You will be returned to the web page log in screen; log off from here also. If you have technical questions about setting up this software or other questions related to accessing the model, call Charley Theobald of DWR at 919-715-5425.
